

# NiNAS

Nigeria National Accreditation Service

## Strategic Plan

2017 - 2021

## INTRODUCTION

International trading relationships are built on trust. Today trust is often built via a structure of standards, agreements, codes and regulations designed to ensure that products depicts what they represent. To achieve this, bodies are established to conduct certification and inspection audits according to rules. Accreditation - ensures that those who carry out testing, certification and inspection are competent to do so. Accreditation is a key component of the National Quality Infrastructure Project (NQIP) for Nigeria. The goal of NQIP is to ensure safety, integrity and marketability of goods and services, and the removal of technical barriers to international trade.

NiNAS transited from being a project to an institution through a partnership between the European Union, the Federal Ministry of Industry, Trade and Investment and, the United Nations Industrial Development Organization (UNIDO). NiNAS was set up to ensure that Nigerian goods and services are produced using appropriate standards, in order to create better, safer and more sustainable products. This will lead to better innovation, new product development, enhanced commercial activity and enhanced consumer protection. NiNAS core functions and other services are expected to come from Nigeria; its prospective market share will cover the entire Economic Community of West African (ECOWAS) region.

There are two reasons that make NiNAS the accreditation body of choice for conformity assessment bodies in Nigeria and in the West African region:

- NiNAS is Nigeria's National Accreditation Body (NAB) that provides credible and cost-effective accreditation services with international recognition.
- NiNAS will increase the marketability of Nigerian and West African goods and services.

## VISION

To be a national and regional leader in the delivery of accreditation services to a global standard.

## MISSION

To attest to the competence and impartiality of conformity assessment bodies according to international standards, in order to monitor and improve the quality and reliability of their outputs, thus promoting competitiveness, trade, health, safety and protection of the environment.
